

by day + by celltype, DE+Tau info

D0

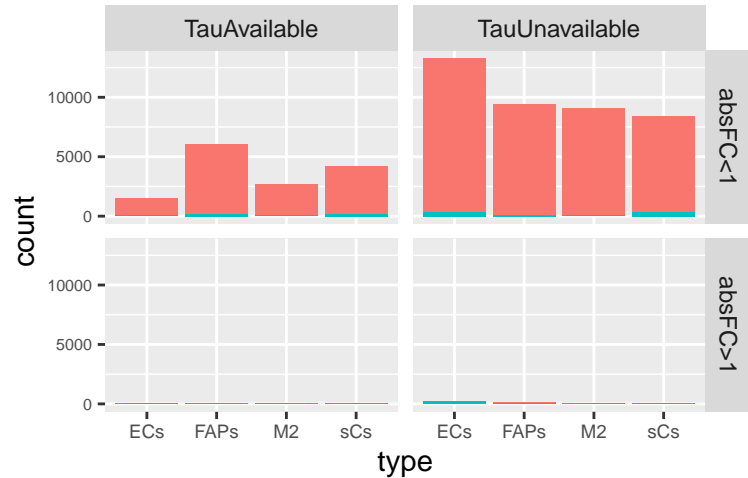

D2

D4

D7

padj < 0.05 FALSE TRUE

PROBLEM detected:
few available Tau for DEGs (absLFC > 1) for this contrast
we see that with this contrast, we cannot use Tau, because most of
the genes in full DE output list cannot be associated to a Tau index
, and the few that could be associated to their Tau exhibit no effect !!!!
